COMPANY PRODUCTS / SERVICES

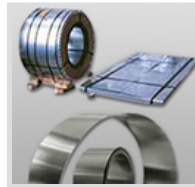

STAINLESS STEEL TUBES

There is a wide range of round, square and rectangular tubes stocked in grades 304, 304L and 316L for the kitchen equipment manufacturing industry, and also for the interior decor industry.

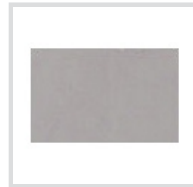

STAINLESS STEEL PIPES

Industrial Stainless steel pipes (grade 304, 304L and 316L) are also stocked in wide range as the number of industries in the Entire Gulf are increasing at an exponential rate and they need very prompt supply of the pipes.

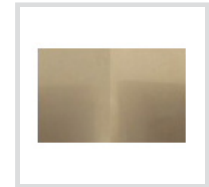

STAINLESS STEEL
LONG PRODUCTS

Also available are Long Products in Stainless Steel including: Stainless Steel Round Bars, Stainless Steel Flat Bars, Stainless Steel Angles.

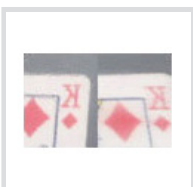

NO. 1 FINISH

A No. 1 finish has rough, dull, and non-uniform appearance. There may be shiny spots were surface imperfections were removed by grinding. It is generally used in industrial applications, such as equipment for elevated temperature service.

2B FINISH

No. 2B is a general purpose cold rolled finish commonly used for all but exceptionally difficult deep drawing applications. It is more readily polished to high luster than a No. 1 or No. 2D finish.

BRIGHT ANNEALED

Produced by heat-treating (annealing) in a controlled atmosphere furnace. It has a mirror like appearance but may have some cloudiness and other imperfections. Bright annealed stainless is sometimes buffed to attain a more mirror-like finish. It is often specified for applications where a highly reflective surface is desired.

NO. 4 FINISH

This general-purpose finish is widely used for restaurant and kitchen equipment, storefronts and food processing and dairy equipment. If a fabricator needs to blend in welds or do other refinishing, the resulting polishing lines are usually longer than on product polished by a producer or toll-polishing house.
